

Flygt and Godwin Support Recovery Efforts at North River Wastewater Treatment Plant

(Bridgeport, New Jersey, USA – July 28, 2011) Godwin Pumps, manufacturer of the Dri-Prime[®] automatic self-priming, dry-running pump, has been mobilizing pipe and crew to aid in the efforts at the North River Wastewater Treatment Plant following a fire there last week.

Five pump engines caught fire in the machine room at the treatment plant in Harlem last Wednesday. The 75-foot lift station fire had caused sewage to enter watersheds and attached beaches. The total required capacity of the facility is about 120 MGD in dry-weather conditions. The two remaining engines that drive the main sewage pumps have been supplemented with six Flygt electric submersible sewage pumps, ranging from 150 hp to 240 hp, to alleviate the temporary overflow conditions. The Flygt pumps were supplied from Cincinnati and Chicago.

Godwin Pumps is supporting the job with piping and engineering. Temporary piping was shipped to the treatment plant, including over 2,000 feet of 18" pipe and 6,000 feet of 24" pipe. Several pipe fusion machines are on-site, with technicians operating them around the clock in order to improve the situation as quickly as possible.
